## **Reflective Journal Entry: Lab 2 – Analyzing Images in Vision Studio**

### **Introduction**

This reflection covers my learning, challenges, and insights from using Azure AI Vision Studio in Lab 2. The goal is to explore Azure's vision tools and understand their practical applications.

### **Description of Experience**

**Background Information:** The lab explored Vision Studio's tools like captioning, tagging, and object detection in a simulated retail environment.

**Specific Details:** I struggled with naming my resource and had to recreate it, improving my understanding of resource management. I also learned the lab only worked with the default region—changing it caused issues, requiring a restart and further exploration of Azure features.

### **Personal Reflection**

**Thoughts and Feelings:** I was excited about hands-on AI work but found setup mildly challenging. Troubleshooting helped me understand the importance of adaptability in cloud tools.

**Analysis and Interpretation:** The lab reinforced my understanding of Azure's vision tools. Unlike previous AI exercises in past classes, this one focused entirely on exploring different features within Vision Studio and how they function.

**Connections to Theoretical Knowledge:** This lab built on last semester's discussions on AI image recognition. It demonstrated how cloud-based AI services operate and how users interact with them to analyze images.

**Critical Thinking:** Naming and region selection issues highlighted the importance of precise configurations when working with cloud-based AI services.

### **Discussion of Improvements and Learning**

**Personal Growth:** This lab improved my troubleshooting and adaptability, helping me see AI tools as practical applications rather than just theoretical concepts.

**Skills Developed:** I learned to configure AI services, troubleshoot deployment issues, and effectively use Vision Studio's features.

**Future Application:** Understanding cloud-based AI tools is valuable for future projects. I'd like to test personal images and explore additional AI-powered features in Azure.

## Conclusion

Summary: This lab provided hands-on experience with Azure's vision tools, showing both their capabilities and limitations.

Final Thoughts: I aim to continue exploring AI-powered services and refine my ability to apply these tools in real-world scenarios. This experience expanded my understanding of Azure's capabilities and how AI vision tools can be used in different industries.
